Alberni-Clayoquot Regional District CONTROLLED WASTE CERTIFICATION

WorkSafe BC Requirements Acknowledgement

Worksafe BC requires a qualified person to inspect the structure to be demolished and to identify any hazardous materials that may be on site. These materials must be properly removed and disposed of by trained and qualified professionals before demolition begins. It is recommended that the applicant/owner contact WorkSafe BC and/or visit their website at www.worksafebc.com.

Below is a list of on-island qualified consultants that can provide the level of service associated with the assessment and removal of hazardous materials. Neither the Alberni-Clayoquot Regional District nor WorkSafe BC endorse the following providers.

**★ IT IS THE SOLE RESPONSIBILITY OF THE OWNER/APPLICANT ★
TO COMPLY WITH WORKSAFE BC REGULATIONS!!**

This handout does not list all of the possible concerns associated with demolition. Commercial and/or industrial properties or other properties with possible site contamination may require completion of a Site Profile which is then submitted to the Ministry of Environment. This is also the responsibility of the owner/applicant.

Workers Compensation Act

OCCUPATIONAL HEALTH AND SAFETY REGULATION

Note: Check the Cumulative Regulation Bulletin 2013

for any non-consolidated amendments to this regulation that may be in effect.

[includes amendments up to B.C. Reg. 404/2012, April 1, 2013]

Part 20 — Construction, Excavation and Demolition

Demolition

Structural integrity

- 20.111** (1) If a structure is to be demolished in whole or in part, the structure and any adjoining structures, the integrity of which could be compromised by the demolition, must be supported to the extent and in a manner prescribed by a professional engineer.
- (2) Design of the support system described in subsection (1) must include a schedule, based on the stages of demolition, for installation of the components of the support system, and a copy of the support system plan must be available at the demolition site.
- (3) While salvage is taking place before or during the demolition process, the integrity of the structure must be maintained.
- (4) If the nature and method of demolition will not endanger workers and the stability of adjoining grounds and structures will not be compromised, engineered demolition plans and designs are not required.

Hazardous materials

- 20.112** Before work begins on the demolition or salvage of machinery, equipment, buildings or structures, the employer or owner must
- (a) ensure that a qualified person inspects the site to identify any asbestos-containing materials, lead or other heavy metal or toxic, flammable or explosive materials that may be handled, disturbed or removed,
- (b) have the inspection results available at the worksite, including any drawings, plans or specifications, as appropriate, to show the locations of any hazardous substances,

(c) ensure that any hazardous materials found are safely contained or removed, and

(d) if hazardous materials are discovered during demolition work that were not identified in the inspection required by paragraph (a), ensure that all work ceases until such materials are contained or removed.

[am. B.C. Reg. 188/2011, App. B, s. 15.]

Disconnecting utility services

20.113 Demolition must not proceed until all utility services which may endanger a worker have been disconnected in the manner required by the owner of the applicable utility service.

[en. B.C. Reg. 312/2010, App. D, s. 4.]

Glass removal

20.114 (1) If glass in a building or other structure could endanger workers it must be removed before other demolition commences.

(2) Glass removal must proceed in an orderly manner from the top to the bottom of the structure.

Repealed

20.115 Repealed. [B.C. Reg. 312/2003, App. C, s. 6.]

Protection from falling materials

20.116 (1) If falling material could endanger a worker, the danger area must be guarded to prevent entry by workers or protected by adequate canopies.

(2) A floor or roof opening through which material may fall and endanger workers must be adequately covered.

Throwing material

20.117 If material is to be dropped or thrown from upper floors, the area into which the material will fall must be barricaded to prevent workers from entering the area and conspicuous warning signs must be displayed to advise of the danger.

Stabilizing walls

20.118 If a dangerous or unstable wall is to be left standing, it must be adequately braced.

Dismantling buildings

20.119 During the dismantling or renovation of a building or structure, materials of a size or weight which may endanger workers must not be loosened or allowed to fall, unless procedures are used that will adequately protect workers.

Housekeeping

20.120 Material and debris must not be allowed to accumulate on floors or on the ground outside the building or structure if workers will be endangered.

Stairways

20.121 Stairways, complete with handrails, must be left intact until access to the level they serve is no longer required.
