

ALBERNI-CLAYOQUOT  
REGIONAL DISTRICT

Alberni-Clayoquot Regional District

# Electoral Area “A” (Bamfield)

## Housing Needs Report

SEPTEMBER 2025

## Acknowledgments

In the spirit of truth, healing and reconciliation, the authors of this report acknowledge that the Alberni-Clayoquot Regional District (ACRD) is located within the traditional territories of 10 Nuu-Chah-Nulth First Nations, being ʕaahʕuusʔaḥ (Ahousaht), Ditidaht, hiškwiiʔaḥ (Hesquiaht), Hupačasath, ʕaʔuukʕiiʔaḥ (Tla-o-quiath), and ʕišaaʔaḥ (Tseshaht First Nation) and four Treaty First Nations, including Huu-ay-aht First Nations, Yuuʕuʔiiʔaḥ Government, Uchucklesaht Tribe Government and tukʕaaʔaḥ (Toquaht Nation) that are ACRD federation members.

First Nations have stewarded the lands and waters that host us sustain our wellbeing since time immemorial. We hope to continue their legacy of learning from, caring for, protecting, and enjoying the blessings of tradition and territory.

The development of this Housing Needs Report was led by the Alberni-Clayoquot Regional District and supported by staff from the Planning department.

## Executive Summary

In 2021, the Alberni-Clayoquot Regional District's (ACRD's) municipalities and electoral areas released their first iterations of Housing Needs Reports (HNRs) in response to new legislation and a changing housing landscape.

Recognizing the dynamic nature of the housing market, the availability of new data, and the necessity for updated housing reports, the ACRD commissioned updated HNRs for its Electoral Areas (EAs). This report provides an overview of key data for Electoral Area "A" (Bamfield), with particular emphasis on current and anticipated local housing conditions and needs. Data included in this report meets the requirements for full housing needs reports as articulated by provincial legislation, updated in June of 2024.

### KEY FINDINGS

#### The Population of Bamfield is Growing and Changing

- Bamfield's total population grew by 6% between 2016 and 2021. During this same period, households declined 28%. Despite the decrease in households, projections anticipate that Bamfield will continue to experience population growth over the next two decades.
- By 2041 there may be about 295 residents living in Bamfield.
- Unlike most other Electoral Areas which are projected to get older, growth in Bamfield has historically been, and should continue to be, greatest among 25- to 44-year-olds.

#### Homeownership is Out of Reach for Most Residents

- The median home sale price rose 106% between 2019 and 2022. The median Bamfield single-detached house sold for almost \$401,000 in 2022.
- From 2012 to 2016, home ownership was only affordable for couple households making the median income. Since 2016, the median price of a home has become increasingly out of reach for all median household types. The gap between what homes sell for and what households can reasonably afford has widened dramatically since 2021.
- Local house prices in Bamfield are increasing at a much higher rate than local incomes, making it increasingly more difficult for current and future residents to purchase a home.

#### Residents in Bamfield are Facing Housing Affordability Challenges

- In 2021, 18% of households in Bamfield lived in an unaffordable home. Renter households are more severely affected by affordability challenges.
- Engagement participants noted that, unlike many rural Electoral Areas, Bamfield has a vibrant local economy with strong community centre and is less connected to nearby municipalities. This drives demand for accommodations to support workers in the tourism, hospitality, and other critical economic sectors.
- Local employers reported that limited housing supply directly impacts their ability to attract, retain, and support employees. Additional, flexible housing options could expand the local economy and support local investment.
- Many residents that participated in engagement felt that their housing expenses were generally

affordable but were worried about their ability to weather unexpected expenses and maintain their homes. This includes the cost of tax increases to pay for additional infrastructure.

- Due to Bamfield’s relatively small population, Statistics Canada has suppressed data related to household incomes. This makes data-driven conclusions about housing affordability challenging. Throughout this report, the median household income of the combined ACRD Electoral Areas is used to conduct affordability analysis.

### **Seasonal Residents and Vacation Properties Place a Unique Strain on Bamfield’s Housing Stock**

- About 80% of properties with a dwelling in Bamfield were classified as “investments” by Statistics Canada in 2022. Many of these properties are likely seasonal or vacation homes but could include permanently occupied rental properties. Only about 23% of residential properties were owner-occupied, the lowest rate in the ACRD.
- In 2021, only 26% of dwellings in Bamfield were occupied by “usual residents” or someone that lives in their dwelling most of the year. The average rate of usual resident occupancy across the ACRD’s Electoral Areas is 76%. Most of Bamfield’s existing housing stock is being used by someone that lives outside of the community.
- Vacation properties and short-term rentals were a consistent concern in engagement. Many residents expressed a desire to further regulate vacation home, ideally returning homes to the permanent rental market or supporting ownership for year-round residents.

### **Demand is Expected to Increase over the Next 20 Years**

- Over the next two decades, provincial projections suggest Bamfield may need to add 53 new homes across the housing spectrum to mitigate increased market imbalances, account for anticipated new demand, and address existing housing deficits. Rental demand projections suggest 56% of new rental units would need to be offered at affordable or below-market prices to best meet the needs of Beaufort residents.
- A considerable portion of the demand will be influenced by population growth. Growth is largely driven by factors outside of local government control including economic opportunities, available services, infrastructure, transportation, natural disasters, federal and provincial policy, and education opportunities.
- Preparing for growth and addressing demand is not just about accommodating new people – it is about preserving and deepening affordability so current residents across all age demographics in Bamfield can stay and thrive locally. Residents of Bamfield were not opposed to growth and were quick to welcome solutions that could support permanent residents and lead a more sustainable, economically viable community.
- Bamfield residents encourage flexible approaches to housing policy that recognize the unique nature of their Electoral Area. This included additional density allowances, creative typologies, and broader use of temporary permits for seasonal housing. Full recommendations are highlighted in the Regional Report.

## **Bamfield Residents are Open to Creative Solutions to Regulate, Facilitate, and Incentivize New Housing**

- Bamfield residents shared several meaningful suggestions to reduce housing need that are within the scope of the ACRD.
- Residents were quick to support additional housing density, typologies, and changes to local legislation that would improve building efficiency. This included support for faster subdivision approvals, additional homes on larger parcels, and increased residential density in serviced areas. Residents also supported flexible application of temporary use permits to encourage create private-sector solutions to housing need.
- Short-term rental regulation was the most common suggestion. Many respondents want to restrict new short-term rentals and reduce existing accommodations through regional bylaw. Many feel that additional short-term rental regulations could return homes to the permanent rental market and help to curb rising sales prices.
- Many residents encouraged the ACRD to explore a regional housing authority to further support non-market housing in Bamfield. In Regional Districts, this is typically done through a Regional Housing Service Bylaw, which would create a regular funding source for affordable housing, land, and infrastructure management. Full recommendations are included in the Regional Summary Report.

## **Community Engagement**

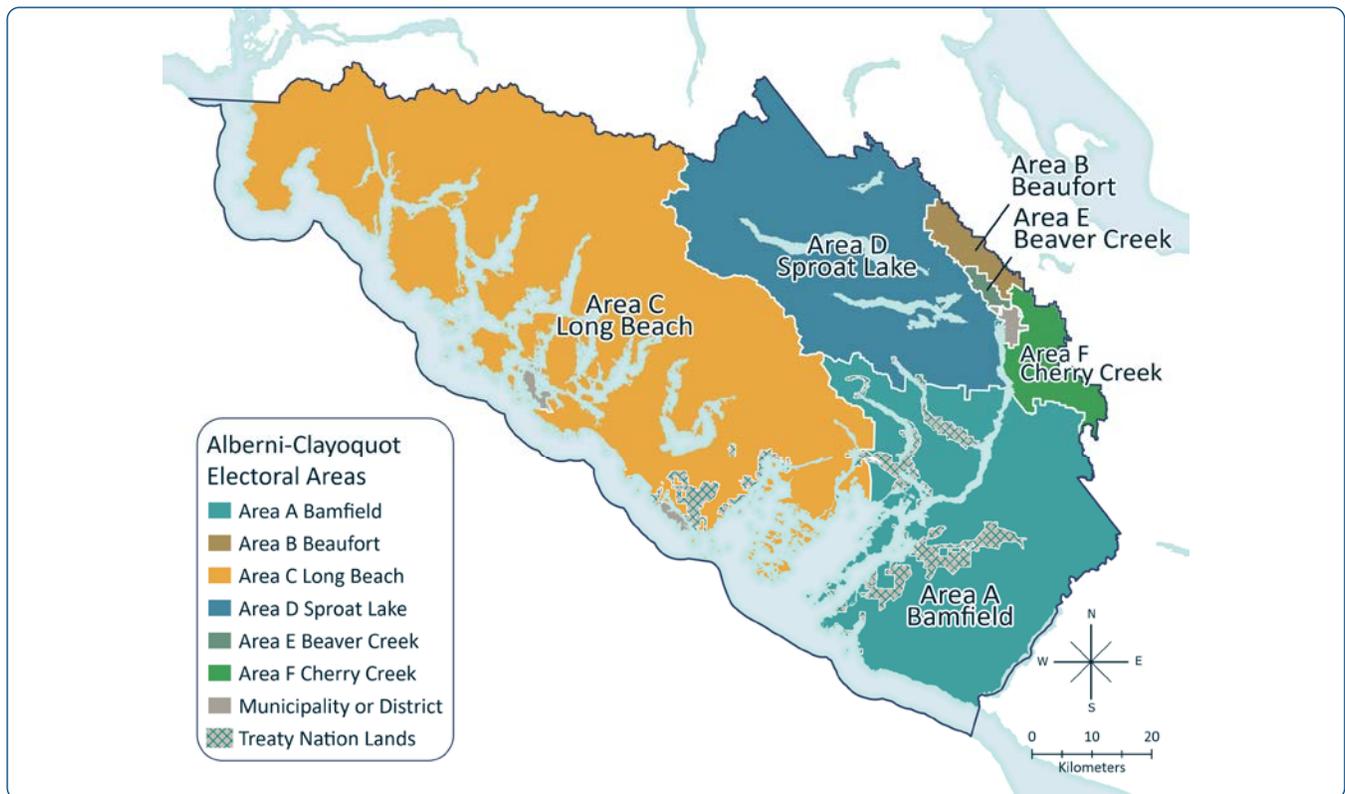

As part of the needs report process, staff from the ACRD and the project team launched a community survey and held focus groups in each Electoral Area in spring 2025. In total the survey received 165 responses from individual community members, 25 of whom were residents of Bamfield. The focus group was held on March 6, 2025 with members of the Bamfield Advisory Planning Commission (APC). The project team delivered a presentation of interim data findings before facilitating an in-depth discussion of housing need. Quotes and engagement findings have been integrated throughout this report and were critical to the recommendations highlighted in the **2025 Alberni-Clayoquot Regional District Electoral Area Housing Needs Report**.

As you read through this report, look for the green background – it means you are reading a community engagement finding or a real quote about housing from a real Bamfield resident!

# 1. Introduction

Using a wide range of quantitative data from provincial and federal sources and qualitative feedback from staff, elected officials, community organizations, and community members, this document analyzes existing and anticipated housing needs and gaps in Electoral Area “A” (Bamfield). Unless otherwise indicated in text, all data included in this report refers solely to electoral area. Figure 1-1 illustrates Bamfield’s location in relation to adjacent communities and the ACRD.

**Figure 1-1: Location Map**

Source: BC Geo Warehouse, Statistics Canada

The purpose of this report is to catalogue current and anticipated housing challenges so that decision makers, regulators, funders, and community members can better understand and react to housing issues in Bamfield. The data gathered and insights generated by a needs report can inform land use and social planning initiatives at local levels, as well as provide evidence to further advocacy to senior levels of government. They are also a useful resource for those engaged in or entering the housing sector.

## 1.1 SOURCES

This report refers to several pieces of data that work together to contextualize housing conditions experienced by residents. The following is a list of secondary quantitative data sources (i.e., information collected by other organizations and used for this report):

- BC Assessment
- British Columbia Statistics
- Canada Mortgage and Housing Corporation (CMHC) – where available
- Local government data
- Statistics Canada
- UBC Housing Assessment Resource Tools (HART)

Limitations for each source are detailed in the next subsection. At a high level, no analysis can be exact without individualized person or household datasets. Many datasets in this report rely on population samples which, though statistically sound, may not feel representative or reflect lived experience in the community. Any analysis in this report should be considered informed estimates rather than precise descriptions.

This is especially applicable to projection work from any source. Estimating variable changes without knowledge of future conditions is inherently flawed. The projections included in this report are subject to economic, social, and environmental conditions that may not persist in the future. Projections should serve as guideposts, regularly recalculated and adjusted to incorporate new information as needed.

### 1.1.1 Data Limitations

#### **BC Assessment**

##### Grouped Information

BC Assessment provides assessment roll spreadsheets for communities across British Columbia for the years 2005/2006 through 2022/2023. Assessment roll information is not on an individual property level; rather, similar types of properties are grouped together in “folios” based on several factors, such as property type and dwelling type. These folio groups also mean that assessment and sale price values reflect averages, making it more difficult to express community level average and median values.

#### **British Columbia Statistics**

##### Urban Focus

BC Statistics helpfully consolidates most data related to complete Housing Needs Reports, like the new homes registry, non-market housing, post-secondary student housing, and homeless count sources. The database primarily offers data for urban areas, potentially excluding unincorporated or rural data, or suppressing data for confidentiality. This is often due to urban communities having greater data quality and quantity.

### **Canada Mortgage & Housing Corporation (CMHC)**

#### **Reporting Landscape**

CMHC conducts its Rental Market Survey (RMS) every year in October to estimate the relative strengths in the rental market. The survey collects samples of market rent levels, turnover, and vacancy unit data for all sampled structures. The survey only applies to **primary rental markets**, which are those urban areas with populations of 10,000 and more. The survey targets only privately initiated rental structures with at least three rental units, which have been on the market for at least three months. In the ACRD, CMHC only collects rental data for the City of Port Alberni.

### **Statistics Canada**

#### **Area and Data Suppression**

Some geographic areas are too small to report, resulting in the deletion of information. Suppression can occur due to data quality or for technical reasons, limiting the use of granular Census geographies. This was of particular concern for certain electoral areas of the ACRD, which are identified throughout respective reports where applicable.

#### **Random Rounding**

Numbers are randomly rounded to multiples of “5” or “10,” leading to potential discrepancies when summed or grouped. Percentages derived from rounded data may not accurately reflect true percentages, introducing a level of approximation. Additionally, the sums of percentages may not equal 100%.

### **UBC Housing Assessment Resource Tools (HART)**

#### **Sourced from Statistics Canada**

While HART offers detailed methodologies for their analysis, they do rely on Statistics Canada datasets. Consequently, the same limitations as stated above apply for HART analysis results.

## 2. Demographic Profile

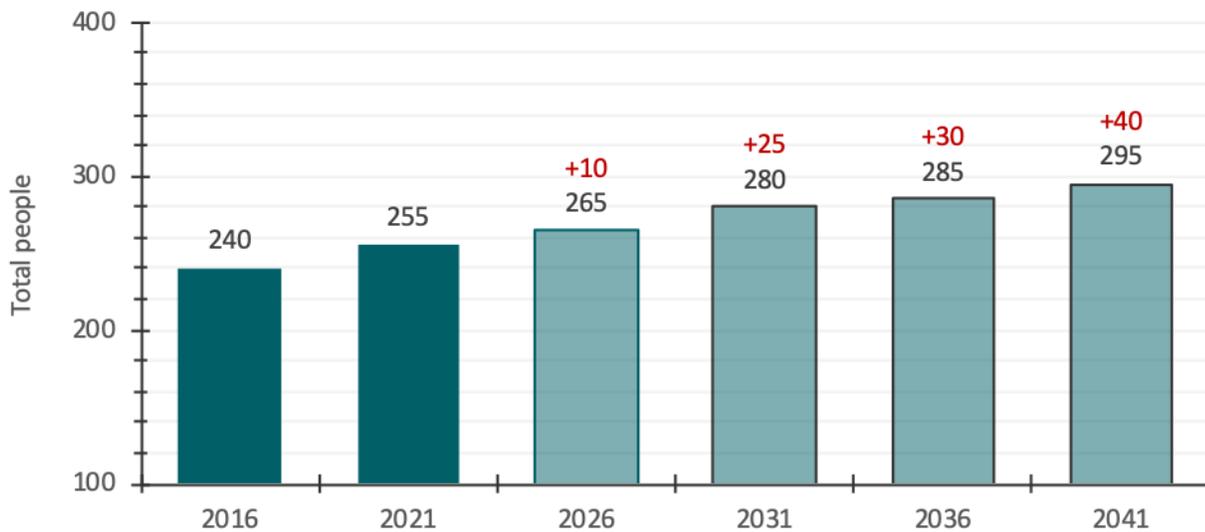

### 2.1 POPULATION

#### 2.1.1 Historical & Anticipated Population

British Columbia’s population grew by nearly 8% between 2016 and 2021 (according to BC Government estimates), driven by economic opportunities, immigration, and quality of life. This growth has heightened the demand for housing, infrastructure, and services, presenting opportunities and challenges for the province as it adapts to a changing demographic landscape.

Figure 2-1 illustrates Bamfield’s changing population between 2016 and 2021 (based on Census data) and its anticipated population by 2041 (derived from BC Government projections based on total growth expected for all rural areas of the ACRD).

**Figure 2-1: Historical and anticipated population, net anticipated change of population since 2021**

Source: derived from Statistics Canada, BC P.E.O.P.L.E projections

Table 2-1 summarizes the historical population changes across different age groups and includes anticipated population figures over the next two decades.

**Table 2-1: Historical (BC Gov't estimates) and anticipated population by age group (BC Gov't projections)**

	Total	0 to 14	15 to 24	25 to 44	45 to 64	65 to 84	85+
<b>Historical population</b>							
<b>2016</b> population	240	5	25	40	105	70	5
<b>2021</b> population	255	15	10	65	90	65	0
% change ('16-'21)	+6%	+200%	-60%	+63%	-14%	-7%	-100%
<b>Anticipated population</b>							
<b>2026</b> population	265	15	10	75	80	75	0
% change ('21-'26)	+4%	+0%	+0%	+15%	-11%	+15%	-
<b>2041</b> population	295	15	10	105	85	85	0
% change ('26-'41)	+11%	+0%	+0%	+40%	+6%	+13%	-
% change ('21-'41)	+16%	+0%	+0%	+62%	-6%	+31%	-

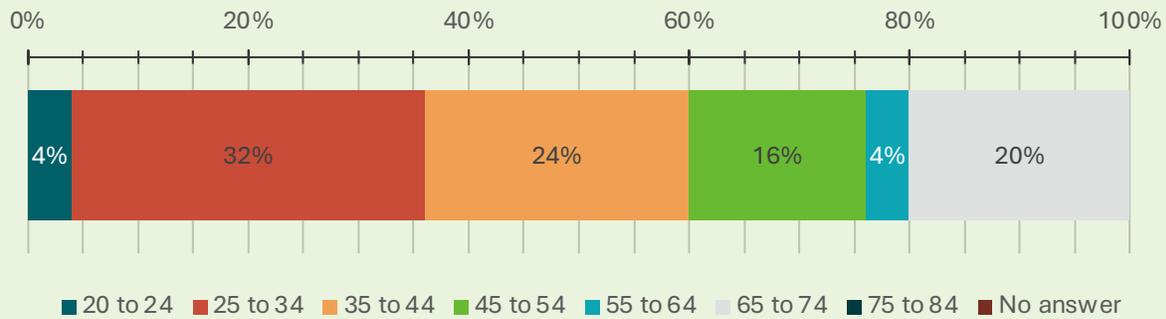

Source: derived from Statistics Canada, BC P.E.O.P.L.E projections

- Bamfield's total population was about 255 people in 2021, up from 240 in 2016 – a 6% increase over the five years.
- The highest rates of growth have been largely among d adults aged 25 to 44. Most other age groups contracted during the five-year period.
- If we assume growth mirrors what is anticipated for the whole of the ACRD's electoral areas, the total Bamfield population may grow 16% over the next two decades, potentially reaching 295 people in 2041. Growth may be isolated among seniors and the 25- to 44-year age group.

### Community Spotlight

Bamfield residents completed the community survey with the highest response rate among ACRD electoral areas. The largest group of respondents were between 25 and 34 years old.

**Figure 2-2: Bamfield survey respondents by age group**

A common theme in engagement feedback was that there are limited options in Bamfield for younger households who wish to relocate to the community or grow their families. Young people were more likely to be in a challenging housing circumstance, and even well-employed households earning good incomes struggled to find appropriate accommodation.

*“I am concerned young people have nowhere to rent – these are people with good jobs in the community, but rentals are not available.”*

*“Double income, no kids couples aren’t able to afford homes here. We have grown out of living in a basement suite but there are extremely few rental opportunities.”*

*“Ask the fire department about their young members who are desperately looking for affordable housing. Without them we’d be severely understaffed and they are leaving for housing opportunities elsewhere.”*

### 2.1.2 Alternative Population Projections

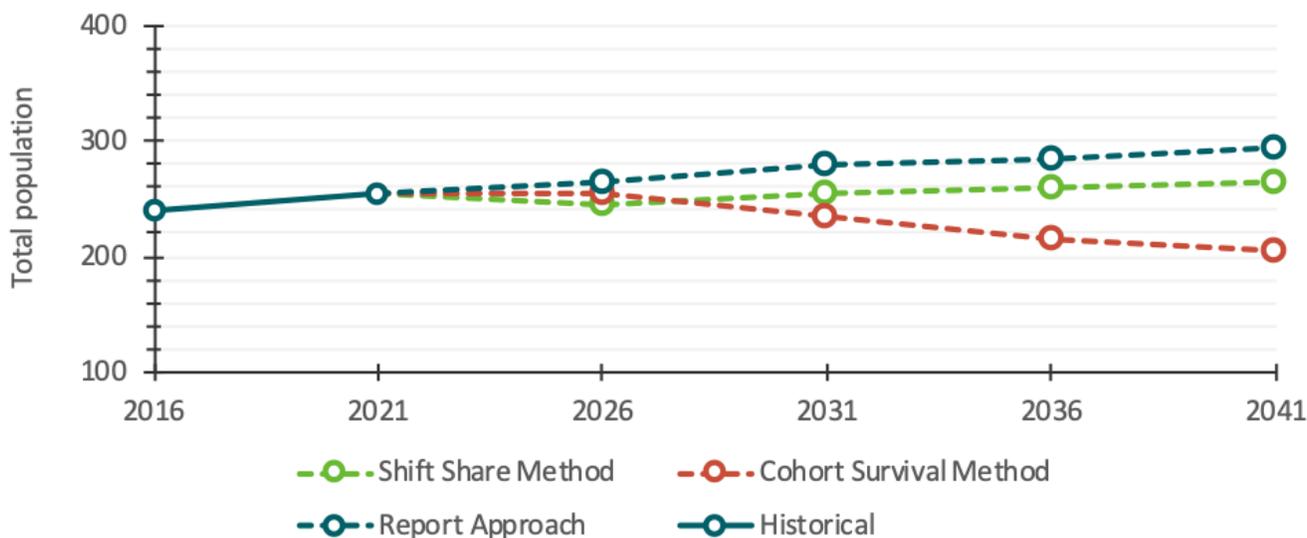

To estimate housing demand, the BC Government prescribes a specific methodology. This includes calculating new demand over a 20-year period (2021 to 2041). The approach is relatively straightforward for electoral areas: assuming that local changes will mirror regional trends, it applies the anticipated rate of growth for all rural areas of the Regional District to each electoral area individually. This is commonly referred to as the “Constant Share” model.

This report uses the Constant Share model to project population and household changes, ensuring consistency with the provincial methodology. However, this is just one of several valid approaches for generating projections.

- **Constant Share** – Assumes a stable historical relationship between a smaller (lower-tier) area and its broader (upper-tier) region. For example, if a community has consistently represented 10% of its regional district and the district grows by 5%, the community is projected to grow by 5% as well.
- **Shift Share** – A variation of the Constant Share model. While it starts with the historical relationship, it also accounts for trends in how that share has changed over time. For instance, if a community’s share of the regional district increased from 5% in 2016 to 6% in 2021, the projection might estimate a 7% share by 2026, implying faster local growth than the broader region.
- **Cohort Survival Method** – Projects population by age group based on historical trends in migration, fertility, and mortality. It assumes these demographic patterns will continue into the future, calculating population changes by tracking each age cohort over time.

Figure 2-3 compares the results of the Constant Share model used in this report with two other widely recognized projection methods. Table 2-2 summarizes the differences in projected 20-year changes across the models.

**Figure 2-3: Alternative total population projection results**

Source: derived from Statistics Canada data

**Table 2-2: Alternative population projection 2021 to 2041 change by defined age group**

Projection type	Total	0 to 14	15 to 24	25 to 44	45 to 64	65 to 84	85+
Constant Share (report)	16%	0%	0%	62%	-6%	31%	-
Shift Share	4%	47%	-50%	45%	-10%	-3%	-
Cohort Survival Method	-20%	92%	6%	-47%	-28%	-21%	-
Average	0%	46%	-15%	20%	-15%	2%	-

Source: derived from Statistics Canada data

- When comparing the three models, the Constant Share and Shift Share approaches produce similar trajectories, but of differing magnitudes, while the Cohort Survival method projects a considerable decline. This discrepancy is expected, as the first two methods are linked to regional trends. The Cohort Survival method focuses solely on Bamfield’s internal demographic dynamics which, when combined with a small total population and individual age groups, leads to much more insular and amplified trends.
- The most notable differences across models appear in the projected changes for specific age groups over the 20-year period. While both the Constant Share and Shift Share models estimate total population growth, the distribution of that growth across age groups differs substantially. The Cohort Survival model also projects a distinct pattern, with particularly different results for the 25 to 44 year age group.
- If we take an average, Bamfield’s population may stay relatively stable at about 255 residents over the next two decades. Adults aged 25 to 44 and seniors may grow over time.

## 2.2 HOUSEHOLDS

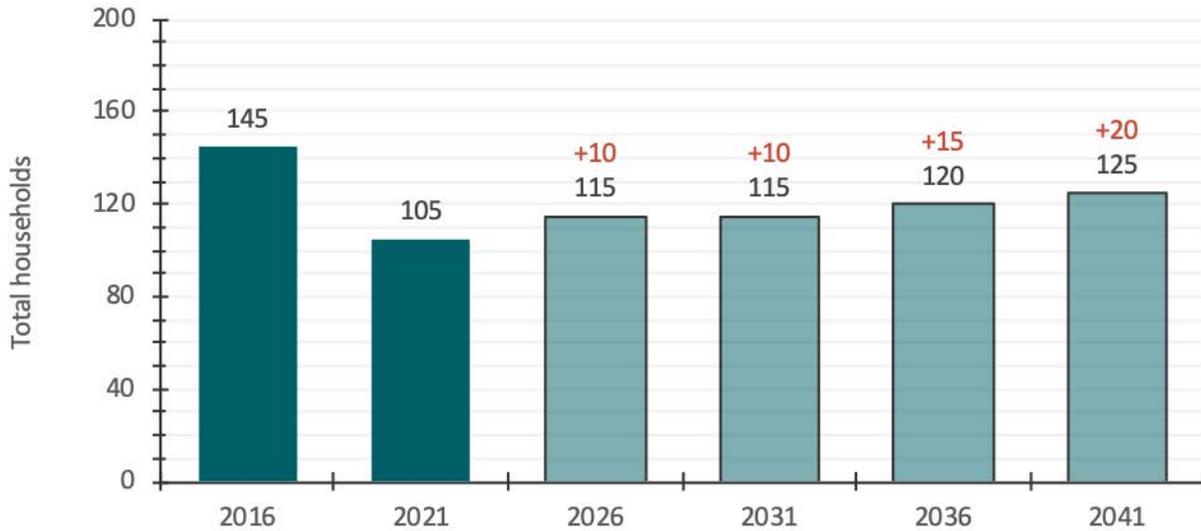

Statistics Canada defines a household as a person or group of persons sharing the same dwelling without another usual residence. A household is the highest-level descriptor of many unique living situations. Households are often categorized in this report by the primary household maintainer’s age, which is the age of the person responsible for major expenses like rent, mortgage, taxes, and utilities. When multiple people share this responsibility, the first listed individual in the Census response becomes the primary household maintainer.

### 2.2.1 Historical & Anticipated Households

Total households and the age distribution of maintainers are influenced by population changes, and driven by factors like relocations, preferences, and financial situations. Changes in household patterns typically align with broader population trends. Household growth is a key driver of housing demand. Since households need dwellings, projections are closely tied to the needed increase in housing stock to accommodate expected population changes. Economic and financial drivers, while influential, are excluded since they are difficult to predict, both in the near- and long-term.

Figure 2-4 illustrates Bamfield’s historical households and the anticipated 20-year net growth in households (2021 to 2041).

**Figure 2-4: Historical and anticipated households, net anticipated change of households since 2021**

Source: derived from Statistics Canada, BC P.E.O.P.L.E projections

Table 2-3 summarizes historical shifts in total Bamfield households, providing insights into expected figures over the next two decades.

**Table 2-3: Historical and anticipated households by primary maintainer age (BC Gov’t projections)**

	Total	15 to 24	25 to 44	45 to 64	65 to 84	85+
<b>Historical households by primary maintainer age</b>						
2016 households	145	10	15	60	50	0
2021 households	105	0	0	65	35	0
% change ('16-'21)	-28%	-100%	-100%	+8%	-30%	-
<b>Anticipated households by primary maintainer age</b>						
2026 households	115	5	10	50	50	0
% change ('21-'26)	+10%	-	-	-23%	+43%	-
2041 households	125	5	15	50	50	0
% change ('26-'41)	+9%	+0%	+50%	+0%	+0%	-
% change ('21-'41)	+19%	-	-	-23%	+43%	-

Source: derived from Statistics Canada, BC P.E.O.P.L.E projections

- According to Census data, there were 105 total households in Bamfield in 2021 – down 28% from 145 in 2016. Readers may wonder why the considerable decrease if there was growth for the total population.

There are a few compounding reasons:

- The data used for households comes from a custom purchase by the BC Government from Statistics Canada. The custom dataset is based on a 25% sample of households, which means the total is derived not from a full enumeration, but of a smaller pool of results that are then used to make an estimate.
- Bamfield’s general resident base is small, which means that there are greater chances for smaller pools of data, from which a sample is derived, to not match the actual result.

According to Statistics Canada, the 100% enumeration for Bamfield is 135 households. This is higher than identified above, but still a decrease. The reason for using the 105 is to remain consistent with data used elsewhere in the report, especially data that is only available from the custom request made by the Province.

- If growth remains similar to expected changes for the ACRD rural areas, then Bamfield’s households may expand by 19% from 2021 to 2041, reaching about 125. If population grows by the average rate predicted by the three projection methods, households may only expand about 2.5%.

## 2.2.2 Additional Household Characteristics

Table 2-4 summarizes the totals and distributions of households by their size per the 2016 and 2021 Censuses, as well as their respective tenure splits.

**Table 2-4: Historical households by household size and tenure share**

2016 Census	Total	1 person	2 persons	3 persons	4 persons	5+ persons	Average HH size
Total households	140	75	55	0	10	10	1.6
Share of total	-	50%	37%	0%	7%	7%	
Owner households	72%	75%	70%	100%	d-	-	1.5
Renter households	28%	25%	30%	0%	-	-	1.9
2021 Census	Total	1 person	2 persons	3 persons	4 persons	5+ persons	Average HH size
Total households	105	55	45	0	0	0	1.8
Share of total	-	55%	45%	0%	0%	0%	
Owner households	81%	73%	100%	-	-	-	1.5
Renter households	19%	27%	0%	-	-	-	3.1
% change ('16-'21)	-25%	-27%	-18%	-	-100%	-100%	

Source: BC Government purchased Custom Statistics Canada Census Tabulations

- Given the considerable overall decrease reported, all defined household sizes also demonstrated a decrease between the two Census periods.
- In 2021, the share of renter households was less than five years prior, declining from 28% to 19%. Note that both total owner and renter households contracted over this time, but the change was much larger in relative terms for renter households.

Table 2-5 summarizes the totals and distributions of households by their household family type per the 2016 and 2021 Censuses, as well as their respective tenure splits. Note that a “census-family with a child” includes both couples and lone parents.

**Table 2-5: Historical households by census-family type and tenure share**

2016 Census	Total	Census-family w/o children	Census-family w/ children	Non-census family*
Total households	140	40	20	85
Share of total	-	29%	14%	61%
Owner households	72%	100%	50%	72%
Renter households	28%	0%	50%	28%
2021 Census	Total	Census-family w/o children	Census-family w/ children	Non-census family*
Total households	105	45	0	60
Share of total	-	43%	0%	57%
Owner households	81%	100%	-	73%
Renter households	19%	0%	-	27%
% change ('16-'21)	-25%	+13%	-100%	-29%

\* A “non-census family” refers to a single person or a household of unrelated individuals (i.e., roommates).

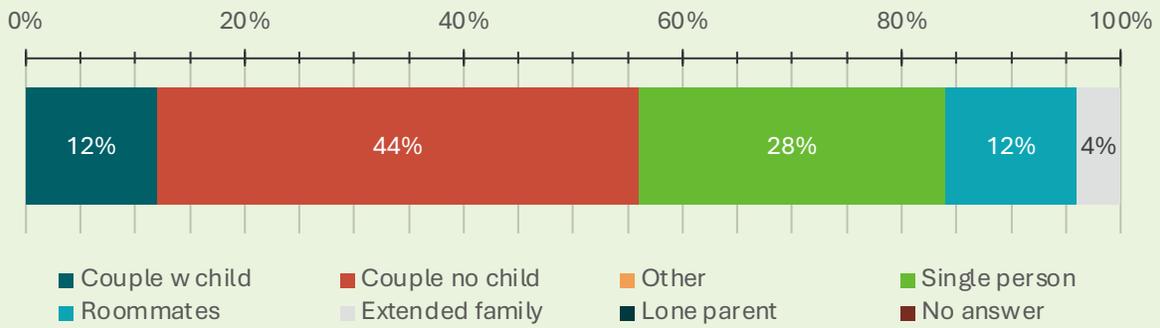

Source: BC Government purchased Custom Statistics Canada Census Tabulations

- Only families without children demonstrated growth according to changes in Census data. When tied to age of maintainer data, this likely reflects growth among the 45 to 64-year-old led segment – a group that increasingly has children who have moved out to form their own households (in this case, elsewhere).

### Community Spotlight

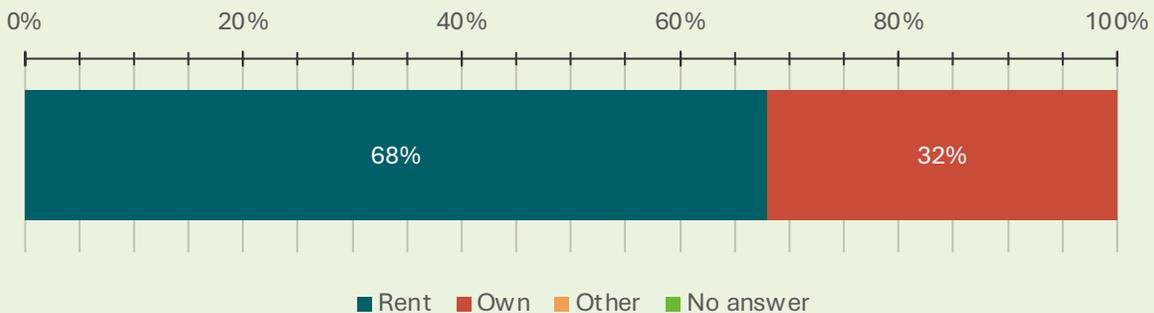

Nearly half of all respondents to the community survey from Bamfield were couples without children. As indicated in the previous section, this is an increasingly common household type in both very young and aging communities. This indicates a potential need for more senior-appropriate housing options, typically smaller, easier to maintain, and often near healthcare resources and community amenities. It may also indicate that young people are choosing to live as a couple household longer before having children due to housing insecurity, financial challenges, or other broader factors.

**Figure 2-6: Share of respondents by household type**

About 68% of survey respondents owned their home, lower than the proportion of owners reported by the 2021 Census. Most owners reported that their housing costs were affordable. Renters were much more likely to be in an insecure housing circumstance.

**Figure 2-7: Share of respondents by tenure**

### 3. Housing Profile

The 2021 Census recorded 404 total dwellings in Bamfield, of which 105 were occupied by usual residents. A usual resident is an owner or renter that lives in their dwelling more than half of the year, which qualifies the dwelling as their primary place of residence. A dwelling associated with a non-usual resident could include a recreational property, short-term rental, or unoccupied dwelling.

Given these numbers, it is estimated that almost 75% of Bamfield dwellings may have been used for purposes other than permanent occupation.

Table 3-1 summarises the totals and distribution by structure type for Bamfield. Note that individual shares may not add to 100% due to rounding.

**Table 3-1: Dwellings occupied by usual residents by structural type and tenure, 2021**

	Total	Single	Row	Semi	Duplex	Apt (<5 floors)	Apt (5+ floors)	Mobile
Total	105	90	0	0	0	0	0	10
Share	100%	86%	0%	0%	0%	0%	0%	10%
Owner	81%	78%	-	-	-	-	-	100%
Renter	19%	22%	-	-	-	-	-	0%

*Source: BC Government purchased Custom Statistics Canada Census Tabulations*

- Single-detached homes account for about 86% of the housing supply occupied by a usual resident (105 units), followed by mobile / movable dwellings at 10% (10 units). Note that these two housing forms were the only ones reported by the data, but they do not equate to 100%. This is due to random rounding and data suppression.

#### 3.1 PROPERTY OWNERSHIP

The Census identified that approximately 75% of dwellings were reported as not being occupied by a usual resident in 2021. While a useful number to quantify the relationship between permanently and non-permanently occupied dwellings, Statistics Canada does not offer much in terms of who owns these non-permanent dwellings. Despite the lack of detailed data, some initiatives from Statistics Canada – particularly the Canadian Housing Statistics Program – provide some insight into local property ownership.

#### Key Definitions:

**Investment property:** A property that is not identified as the primary place of residence for the owner. This could be a second home like a recreational property or a rental property, among other uses.

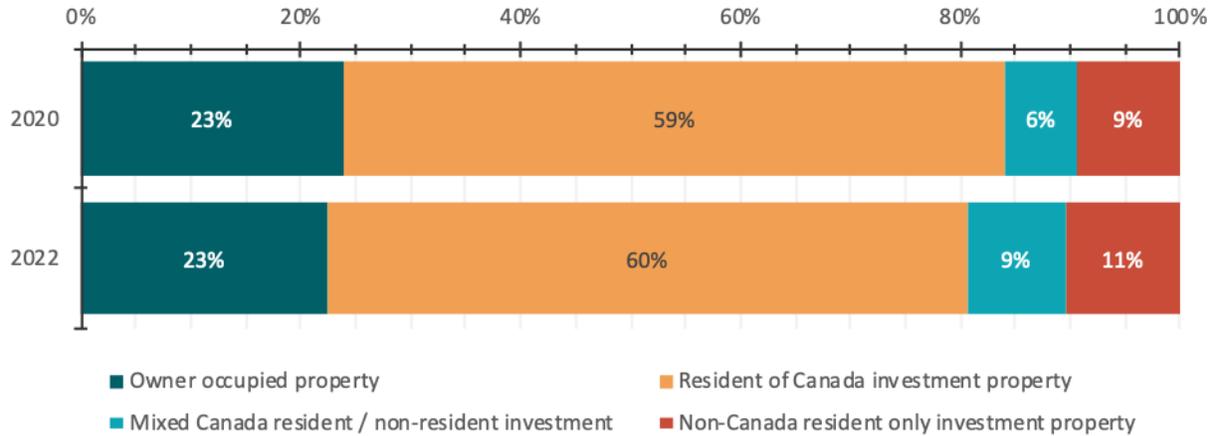

**Non-investment property:** A property owned and occupied by the owner.

**Resident:** A person who lives in Canada as their primary country of residence.

**Non-resident:** A person who does not live in Canada as their primary country of residence.

Figure 3-1 illustrates how the distribution of improved residential property ownership (i.e., a property with a dwelling on it) has changed from 2020 to 2022; specifically, what share of properties are owner occupied, owned by residents of Canada, and owned by non-residents of Canada. Note that values may not equal 100% due to rounding.

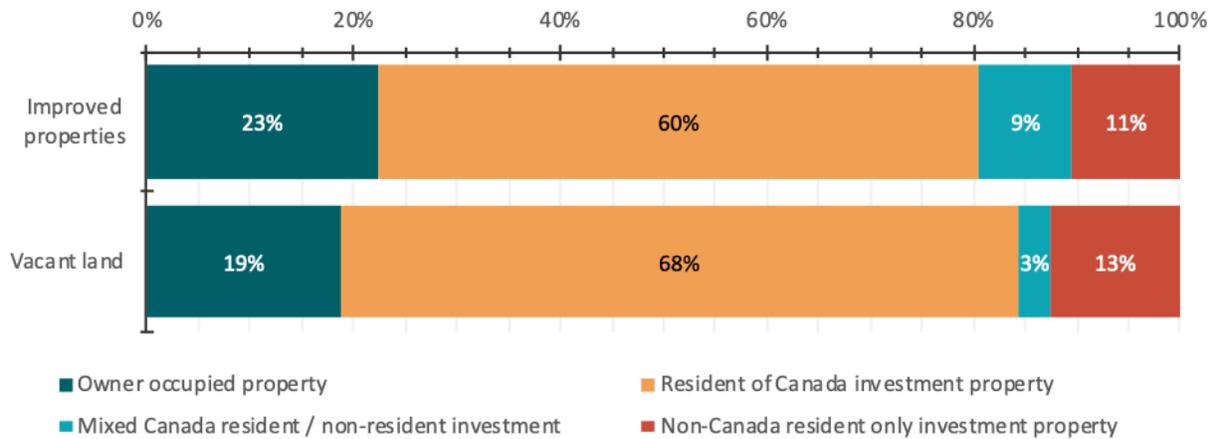

**Figure 3-1: Share of local residential improved properties by ownership type**

Source: Canadian Housing Statistics Program

Figure 3-2 illustrates how the distribution of ownership differs between an improved residential property and vacant land intended to be residential in 2022 (the most recent year collected). Note that values may not equal 100% due to rounding.

**Figure 3-2: Share of local residential improved properties versus vacant residential properties by ownership type, 2022**

Source: Canadian Housing Statistics Program

- About 75% of properties with a dwelling were classified as “investments” by Statistics Canada in 2020, increasing to 80% in 2022. Included are permanently occupied rental properties owned by someone who may or may not have lived in the community.
- In 2022, about 11% of dwellings were owned entirely by someone who does not live in Canada permanently, up from 9% two years prior.
- Growth among mixed participation (i.e., combined ownership between resident and non-resident owners) was notable, increasing from 6% to 9% over the two years. The share of resident of Canada investor-owned residential property remained similar.
- Vacant properties intended for residential uses were majority owned by resident of Canada investors, though 13% belonged to persons not living in Canada.

### **Community Spotlight**

Vacation properties and short-term rentals were by far the largest concern of Bamfield residents who responded to the survey. Of the 25 responses, nearly 20 mentioned limited long-term rental options and rising property values due to vacation home investors and short-term rentals. Many encouraged legislative changes to limit short-term rentals and curb empty homes.

*“MANY homes in Bamfield sit vacant for the majority of the year and recently another house which had a couple of viable rental units (occupied) was taken over by the owner so he could have a vacation home.”*

*“Same problem as any desirable tourist destination on the island - high demand for services accessed by tourists, no where for the people serving them to live.”*

*“Enough with the empty houses!”*

*“So many houses that are empty for most of the year and lots of young working professionals being driven out of town due to lack of housing.”*

*“There is very little full-time rental housing availability in Bamfield. Many houses are mostly used for summer vacation rentals, meaning people with full-time jobs are sometimes living in their cars or tents during the summer.”*

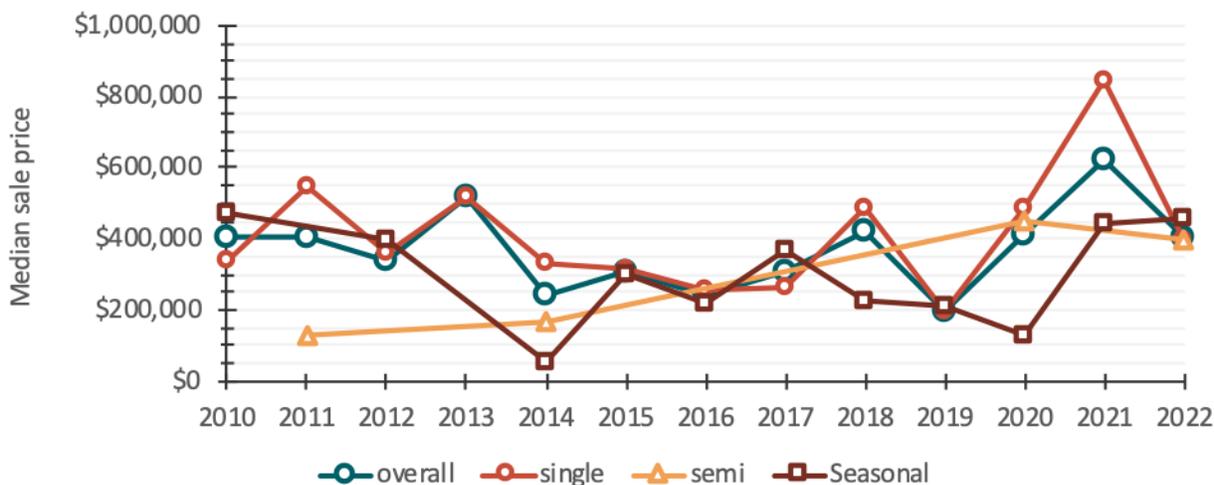

*“Way too many empty houses in Bamfield that are (a) always empty, (b) only used as a vacation home for a few weeks in the summer or (c) only rented out as Airbnb.”*

### 3.2 MARKET HOUSING

#### 3.2.1 Home price trends

Figure 3-3 illustrates historical median home prices by dwelling type. The data is sourced from BC Assessment’s historical revised rolls, which include sales information up to and including 2022. The dwelling types provided by BC Assessment have been reclassified to align with the categories used by Statistics Canada in their Census questionnaire.

**Figure 3-3: Annual median sale price by dwelling type**

Source: derived from BC Assessment

Table 3-2 offers the same data, but this time it presents the percentage change in median home prices by dwelling type over specific time intervals.

**Table 3-2: Sale price and percentage change by dwelling type and select years**

	Sale price				Percent change		
	2013	2016	2019	2022	'13-'16	'16-'19	'19-'22
Overall	\$517,500	\$244,000	\$197,700	\$407,200	-53%	-19%	+106%
Single-detached	\$517,500	\$256,300	\$195,000	\$400,900	-50%	-24%	+106%
Semi-detached	-	-	-	\$399,000	-	-	-
Seasonal	-	\$216,100	\$214,000	\$460,000	-	-1%	+115%

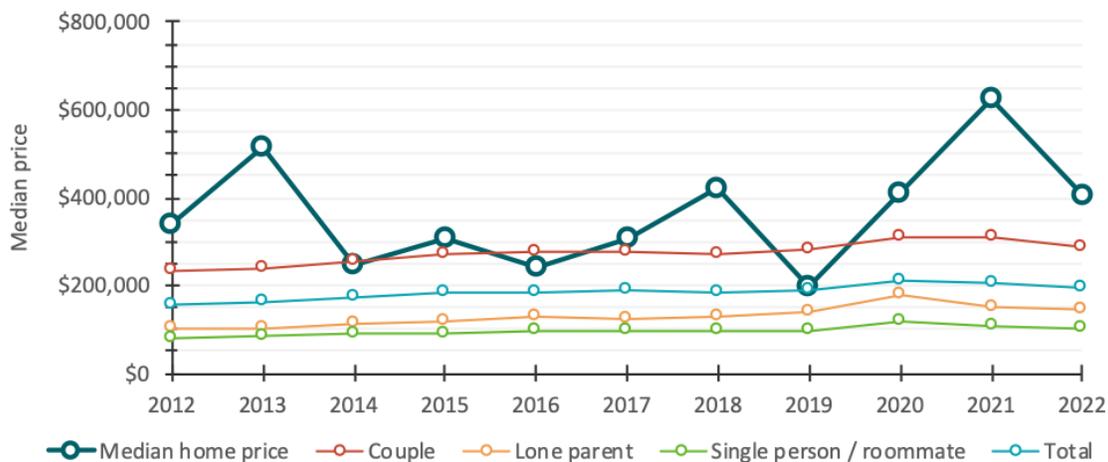

Source: derived from BC Assessment

- While prices are based on small samples (e.g., 2013 had 2 sales), the data suggests that local prices were decreasing until about 2019. Home prices rose 106% from 2019 to 2022. By 2022, the median home price had reached \$407,200.

### 3.2.2 Homeownership attainability

Figure 3-4 compares the median home price in Bamfield to the estimated price different household types earning the median income could afford. An “affordable price” is set using a variety of mortgage assumptions (see Appendix C: Mortgage Assumptions for a detailed explanation) and the median annual income of each household family type. The purpose is to highlight the impact of changing local incomes and prices on affordability.

**Figure 3-4: Historical estimated affordable dwelling price by household type vs actual median home price**

Source: derived from BC Assessment, custom Statistics Canada dataset<sup>1</sup> and mortgage assumptions

- From 2012 to 2017, the median couple household was generally the only defined household type to be able to afford the median house price. Couple households were the most capable of accessing housing given the likelihood of having a dual income.
- Since 2017, the median price of a home has become increasingly out of reach for all median household types (with some fluctuation), with the largest gap occurring in 2021.
- Notably, the gap between the median house price and the affordable threshold for the median household was approximately \$58,700 in 2016. The gap widened to escalating and \$214,500 in 2022 (down from \$418,700 in 2021).
- Homeownership attainability data highlights the notable disparity between growth in prices and growth in estimated incomes, leading to reduced purchasing power for shelter for most households in the community.

**Important Note:**

The gap between the affordable purchase price and actual price reflects the median. There are individuals or households who face significantly greater and significantly less financial challenges related to their shelter. As of 2021, 12% of owner households across the ACRD reported not reasonably affording where they live.

<sup>1</sup> Statistics Canada. Table 11-10-0012-01 Distribution of total income by census family type and age of older partner, parent or individual. DOI: <https://doi.org/10.25318/1110001201-eng>

### **Community Spotlight**

Many respondents from Bamfield cited rising sales prices as a critical challenge. Purchasing a home has always been difficult due to limited sales volumes, but most renters no longer see homeownership as a viable option. Even multiple-income households are unable to save enough enter the housing market. Many established residents who bought homes decades ago worry their children won't be able to remain in the Bamfield. Increasingly, long-time residents are being displaced by investors from other communities.

*"With the occasional exception, all available real estate in Bamfield is far too expensive for the average working young person and is clearly aimed at buyers looking at second homes/vacation properties."*

*"We urgently need more affordable housing including long-term rental options for people who cannot afford to buy a house (most people)."*

*"The cost to buy a house has skyrocketed beyond what most locals could hope to afford. I know of only 4 community members who have bought a house in the last four years, and that is because they all worked to buy one together."*

*"Our children both have families and are struggling to save to buy homes."*

### **3.3 NON-MARKET HOUSING**

Non-market housing encompasses all forms of housing not subject to market forces. This includes public or social housing, affordable housing offered by non-profit organizations or government supported entities, and transitional and emergency shelters, among others.

Simply put, Bamfield does not provide non-market housing units, nor do any of its residents receive support to afford their shelter. In total, 1,045 ACRD residents / households were receiving housing assistance as of March 2024.

## 4. Housing Need

### 4.1 HOUSING CRITERIA

CMHC's Core Housing Need (CHN) metric measures three critical housing criteria and whether reasonable alternatives exist in the market. A household is in core housing need if its housing does not meet one or more of the following standards:

#### **Adequate**

Housing is considered adequate when it isn't in need of major repairs. Major repairs include defective plumbing or electrical wiring, or structural repairs to walls, floors, or ceilings.

#### **Suitable**

Housing is considered suitable when there are enough bedrooms for the size and make-up of resident households. This is according to National Occupancy Standard (NOS) requirements.

#### **Affordable**

An affordable home costs less than 30% of the occupying household's before-tax household income.

Acceptable housing is adequate in condition, suitable in size, and affordable. An added metric is "Extreme Core Housing Need (ECHN)," which refers to a household paying more than 50% of their income on shelter costs.

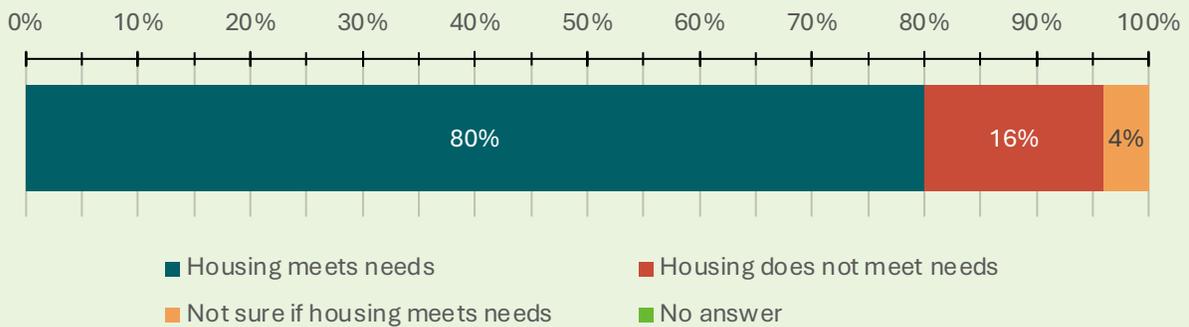

Historically, unaffordability has contributed the most to rates of CHN. However, a household in an unaffordable home does not necessarily mean they are experiencing CHN. CHN also considers whether affordable alternatives exist. In other words, CHN accounts for and does not include households living in an unaffordable home by choice (e.g., buying a home that is expensive now, but may be affordable later as the household income grows.)

Note that, due to confidentiality concerns, housing needs data for Bamfield is unavailable. The below showcases need for the ACRD overall.

**Community Spotlight**

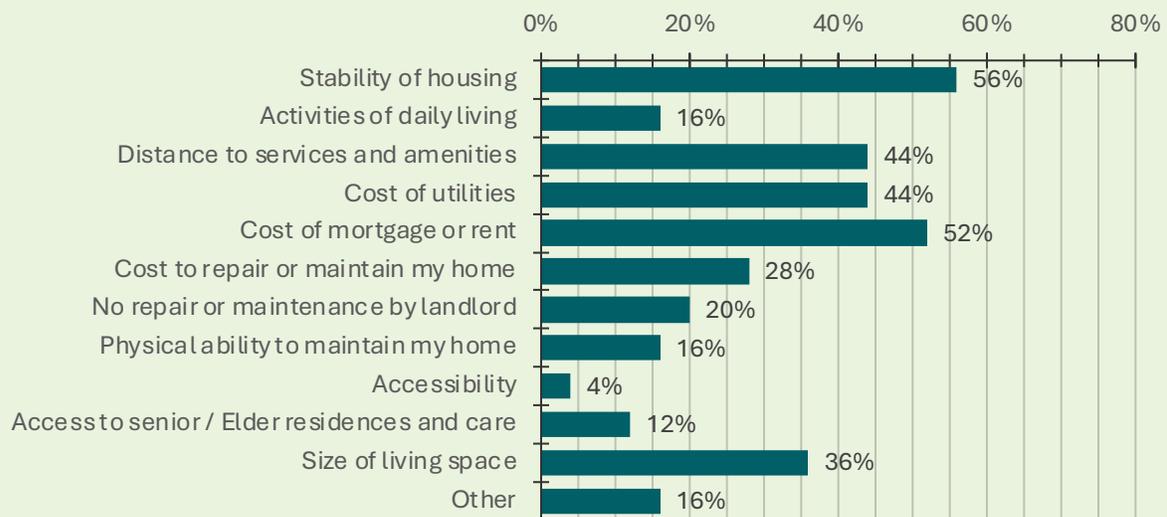

Most survey respondents from Bamfield currently have adequate housing but 16% reported that their current home does not meet their needs. Across the ACRD only about 12% of households are in Core Housing Need, indicating that residents of Bamfield, especially renters, are likely facing greater housing insecurity than neighbouring Electoral Areas.

**Figure 4-2: Share of respondents by whether they consider their housing to meet their needs**

Across the ACRD, cost and size were the two most common reasons cited for why a respondent's current home did not meet their needs, followed a need for major repairs. When asked to think about potential housing challenges in the futures, residents of Bamfield were more concerned with stability of their housing and cost, often related to uncertainty in the permanent rental market. Utilities and distance to services and amenities were also significant concern.

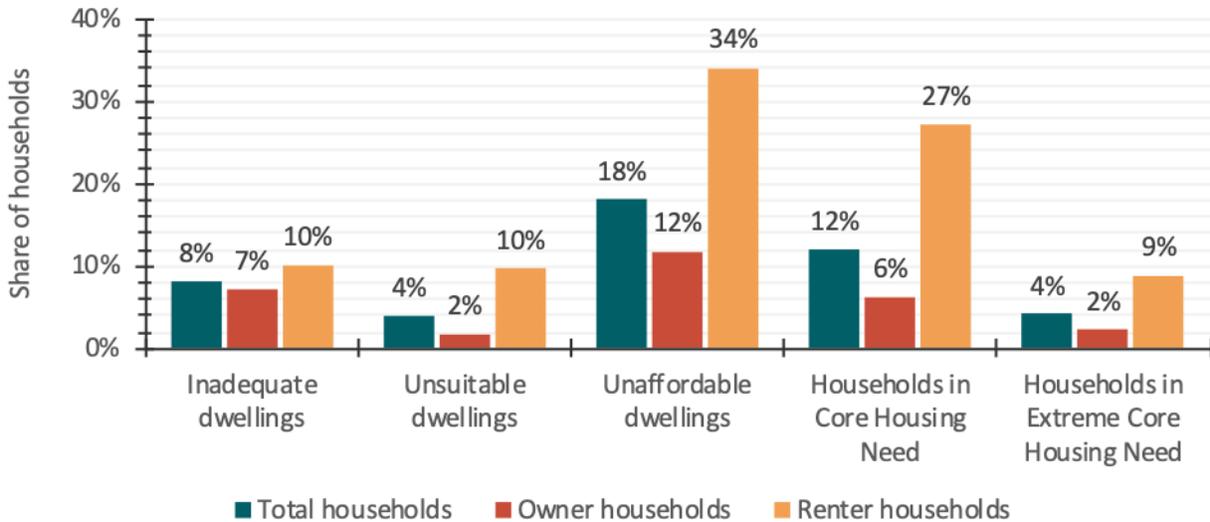

**Figure 4-3: Propensity of concerns respondents have for their future selves (in five years)**

## 4.2 HOUSING NEED BY TENURE

Figure 4-1 shows the rates of inadequacy, unsuitability, unaffordability, CHN, and ECHN for all households as well as households by tenure. Note that blanks exist where the data showed zeros, which are assumed to be cases of suppression resulting from Statistics Canada’s rounding practices to protect confidentiality.

**Figure 4-1: Share of households experiencing a specific housing indicator by tenure, ACRD, 2021**

Source: BC Government purchased Custom Statistics Canada Census Tabulations

- In 2021, about 8% of the ACRD’s dwellings required major repairs and 4% were overcrowded.
- Unaffordability is the housing indicator that is often most prevalent among households. Regionally, 18% of households lived in unaffordable circumstances.
- Renter households are most severely affected by unaffordability (34%) and Core Housing Need (27%). This is largely related to a higher number of single income earners living in rental households, some of whom are seniors on fixed incomes.

### 4.3 ENERGY POVERTY

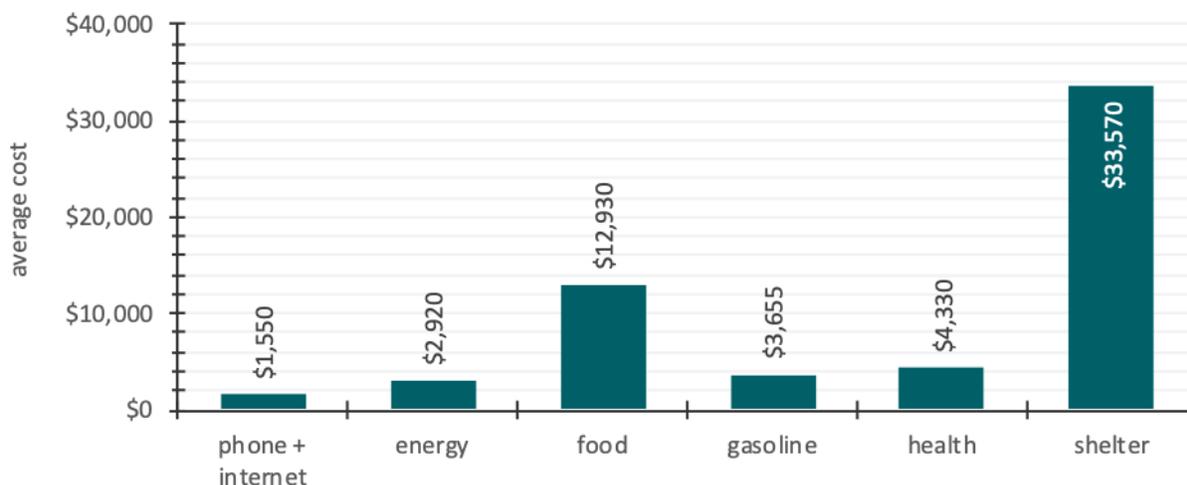

There are several expenses that contribute to the overall cost of housing. While these costs have always been a critical factor in determining a home’s affordability, recent years of high inflation have brought household expenses to the forefront – namely, the rising cost of energy. Alongside increasing mortgage and rent payments, concurrently rising energy costs are pushing more households into “energy poverty.”

According to the Canadian Urban Sustainability Practitioners (CUSP), energy poverty refers to the experience of households or communities that struggle to heat and cool their homes and power their lights and appliances. Canadian academics have developed three key thresholds to define a disproportionate energy cost burden relative to a household’s average after-tax income. A home is considered in energy poverty if it meets any of the following criteria:

1. Spending more than 6% of after-tax income on utilities,
2. spending more than 4% of after-tax income on fuel used for transportation, and
3. spending more than 10% of after-tax income for the combined of (1) and (2).

Figure 4-2 illustrates selected average annual living cost estimates for owning and renting households in Bamfield, inclusive of energy and gasoline costs. These estimates are produced using Statistics Canada’s 2019 Household Spending Survey data, adjusted by inflation and estimated locally based on distributions of dwelling structure types.

**Figure 4-2: Average living expenses, 2024**

Source: Statistics Canada Household Spending Survey, 2019 – adjusted to 2024 dollars using annual CPI

- Shelter cost estimates are the most expensive item for a household. The typical household pays approximately \$33,570 on shelter annually, including ancillary costs like insurance, condo fees, and taxes (if applicable). Food costs are the second-highest expense.
- To avoid being considered in “energy poverty,” a household would require an after-tax income of at least \$48,700 to afford the average annual energy bill.
- To consider vehicle gasoline costs affordable, a household would need an after-tax income of \$91,400. The most burdensome energy costs for households are vehicle expenses. This is due to the vast geographies that many residents must regularly travel.

It is important to note that results for energy poverty may be underrepresent actual need, as they cannot quantify whether households are living comfortably or just scraping by. The closer a household is to the energy poverty line, the greater the likelihood that they must make concessions in comfort to reduce energy costs.

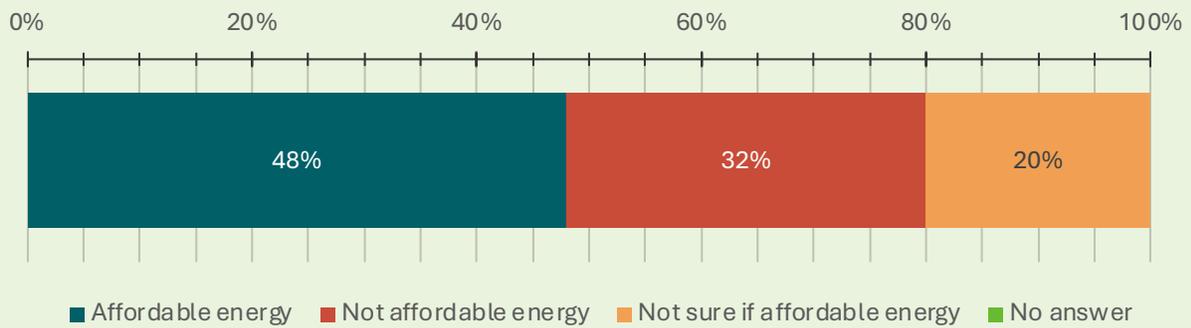

### Community Spotlight

Utility and transportation costs often have an outsized impact in established rural communities like Bamfield. Many residents have completely paid off their mortgage but still need to pay for utilities and fuel costs associated with travel to and from services and amenities. In rural communities, energy bills often exceed the cost of housing and are more challenging for households to maintain.

Nearly 25% of respondents from Bamfield paid more than \$400 in transportation costs every month. Less than half of respondents felt their energy expenses were affordable, and many commented on the distance to services and challenges with local transportation infrastructure.

Figure 4-6: Share of respondents by whether they feel their energy expenses are affordable

*“We also need more government dock space. More people live in West Bamfield without the means to rent private dock space, and the government dock often has boats tied up 3-deep overnight.”*

*“Parking is a serious issue. We need to commute by car for supplies.”*

*“My current rental is a tiny home that is \$700 a month and boat access only. Therefore, not only do I need a car to live here, I also need a boat.”*

## 5. Anticipated Housing Demand

### 5.1 DEMAND BY COMPONENT

In June 2024, the Province of British Columbia released a standardized HNR demand calculation methodology. The HNR Method estimates the total number of housing units required to address a community’s current and anticipated housing needs over 5- and 20-year timeframes, based on publicly available data sources that can be applied to communities of various scales. It is composed six components (labeled A through F in Table 5-1). The standardized method for calculating demand ensures that all local governments produce consistent and comparable assessments of their housing need.

Table 5-1 provides a summary of the result for each component of the HNR Method for the Bamfield over the next 5 and 20 years, as required by legislation.

**Table 5-1: Anticipated housing demand by anticipated period and component**

Component	Housing units for:	Intention	5 year (by 2026)	20 year (by 2041)
A	Households in Extreme Core Housing Need	To estimate the number of new units required for those in vulnerable housing situations. Extreme need refers to those paying more than 50% of household income on shelter costs.	0	0
B	Individuals experiencing homelessness	To quantify the supply of permanent housing units required for those currently experiencing homelessness.	1	2
C	Suppressed households	To address those households that were unable to form between 2006 and the present due to a constrained housing environment.	7	29
D	Anticipated household growth	To quantify the additional households required to accommodate an increasing population over twenty years. Note that anticipated growth for municipalities is based on the average of local and regional projections (thus, population / household growth trends discussed above may not follow the same trajectory as dwelling projections) and electoral areas use solely regional projections.	11	21
E	Increasing the rental vacancy rate to 3%	To add surplus rental units to restore local vacancy rates to levels representing a healthy and well-functioning rental housing market. Typically, rates between 3% and 5% are considered healthy rates.	0	0

Component	Housing units for:	Intention	5 year (by 2026)	20 year (by 2041)
F	A local demand buffer	To reflect additional demand for housing within a given community, beyond the minimum units required to adequately house current and anticipated residents. This is called the “demand buffer” and is designed to better account for the number of units required to meet “healthy” market demand in different communities. For the purposes of HNRs, a demand factor is based on a ratio of housing price to housing density, and is calculated for each applicable community.	0	0
<b>TOTAL:</b>			<b>19</b>	<b>53</b>

Source: HNR demand calculation methodology ([link](#))

- The results indicate that Bamfield may need to build 19 units by 2026 and 53 units by 2041.
- Most of the demand comes from future growth and households that have been suppressed from forming (estimated since 2006).
- Components A, B, C, and E attempt to catalog unmet “current” demand, and thus serve as an estimate of the existing housing shortage (without considering any changes since 2021, which is the reference year).

## 5.2 DISTRIBUTION OF DEMAND

### 5.2.1 Housing price model and dwelling size

An adaptation of the HNR Method provides a rough idea of current market and non-market housing demand and what Bamfield can expect over the 20-year projection period. HNR Method guidelines do not prescribe how to perform this analysis, allowing for community level discretion.

Table 5-2 summarizes the results of applying the dwelling size distributions discussed in the **2025 Alberni-Clayoquot Regional District Electoral Area Housing Needs Report** to project demand in Bamfield. The outcome of this analysis is a table outlining anticipated demand, disaggregated by the number of bedrooms and intended market / price model. Non-market housing has been further separated into “affordable / below-market” housing (i.e., housing explicitly offered at prices below market, like the 80% of Median Market Rent criteria described by CMHC funding opportunities or rent-geared to income housing) and “deeply affordable” housing (i.e., rents offered at the shelter rate of income assistance, often combined with support services).

To distinguish what portion of the community might benefit from non-market housing, HART’s income categories and how they overlap across the housing continuum are considered. Briefly, we apply the historical proportions of households earning “very low” and “low” incomes to demand totals. The demand for deeply affordable and below-market units represents these respective income categories.

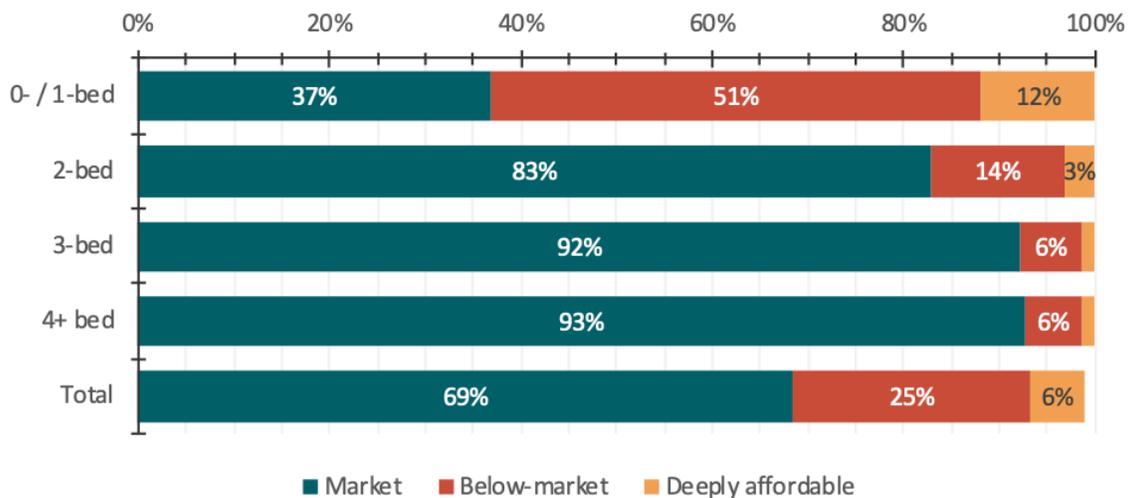

**Table 5-2: Anticipated demand disaggregated by anticipated price model and required number of bedrooms**

	Market		Affordable / below-market		Deeply affordable		Total	
	5-year	20-year	5-year	20-year	5-year	20-year	5-year	20-year
0- / 1-bed	3	7	4	10	1	2	7	19
2-bed	4	11	1	2	0	0	5	13
3-bed	4	11	0	1	0	0	4	12
4+ bed	3	7	0	0	0	0	3	8
<b>Total</b>	<b>13</b>	<b>36</b>	<b>5</b>	<b>13</b>	<b>1</b>	<b>3</b>	<b>19</b>	<b>53</b>

Figure 5-1 illustrates the distributions of the above price models by the number of bedrooms to show what dwelling sizes are best targeted by market or non-market interventions.

**Figure 5-1: Distribution of price model demand by number of bedrooms, 2041**

- The 5- and 20-year demand projections suggest a need for 19 and 53 units, respectively.

- Market housing should remain the primary contributor to the local inventory, though there is a clear need for non-market interventions. By 2041, Bamfield may need 13 affordable / below-market offerings and 3 additional deeply affordable units.
- As suggested by the calculated shares of units by number of bedrooms, market housing demand will likely focus more on larger units; whereas, non-market solutions may distribute more to 0- and 1-bedroom dwellings.

### 5.3.1 Housing price model and tenure

For the most part, the market will ultimately decide whether new dwellings are built for rental or ownership based on prices and preferences. However, adapting data to estimate how demand might distribute between owner and renters is useful for understanding which price models might be most needed over time. Table 5-3 showcases the results of this analysis.

**Table 5-3: Anticipated demand disaggregated by anticipated price model and tenure**

Price model:	5-year (by 2026)		20-year (by 2041)	
	Owner	Renter	Owner	Renter
Market housing	10	3	27	9
Affordable / below-market	2	3	5	8
Deeply affordable	0	1	0	3
<b>Total</b>	<b>12</b>	<b>7</b>	<b>32</b>	<b>20</b>

- While it is likely that market housing demand will mainly be for owner-occupied housing, there is a notable forecasted interest in expanding the local market rental inventory, especially as single person (and thus single income earning) households become more prevalent.
- Non-market solutions typically take the form of rentals, but data suggests there could be demand for below-market ownership options, which could mean considering alternative forms of ownership such as co-operatives or community land trusts if funding and support programs materialize.

## 6. Conclusion

Bamfield's housing landscape is evolving, driven by a notable increase in both population and households from 2016 to 2021. This growth trend is expected to continue through the next two decades, leading to a sustained rise in housing demand.

The median home price appreciated 106% between 2019 and 2022. While price increases have likely leveled off or softened since, this has notably exacerbated housing affordability challenges overall.

In 2021, approximately 18% of regional households lived in unaffordable circumstances, suggesting that there is a clear demand for affordable local housing options. Estimates suggest that about 16 subsidized units could be required over the next 20 years to meet the needs of those most vulnerable. Overall, Bamfield may require an additional 53 total housing units be built by 2041 to mitigate existing and future market imbalances, according to the BC HNR Method calculations. Data driven conclusions about housing affordability are difficult to draw in Bamfield due to the relatively small population, seasonal variance, and tremendous number of non-resident owners. Available data likely underestimates true need, especially for long-term rental options.

Bamfield residents shared several meaningful suggestions to reduce housing need. Many are outside the scope of regional government, but short-term rental regulation and a Regional Housing Service Bylaw could increase the number of permanent rentals and give the ACRD additional resources to invest in affordable housing, land, and infrastructure management. Full recommendations are included in the Regional Summary Report.

The data presented here is intended to support and supplement the important work already being undertaken by the regional district and its partners. Though it will be challenging, Bamfield, with support from the ACRD, partners, and senior levels of government, can address the housing needs outlined in this report.

## Appendix A: Definitions

**“bedrooms”** refer to rooms in a private dwelling that are designed mainly for sleeping purposes even if they are now used for other purposes, such as guest rooms and television rooms. Also included are rooms used as bedrooms now, even if they were not originally built as bedrooms, such as bedrooms in a finished basement. Bedrooms exclude rooms designed for another use during the day such as dining rooms and living rooms even if they may be used for sleeping purposes at night. By definition, one-room private dwellings such as bachelor or studio apartments have zero bedrooms;

**“census”** means a census of population undertaken under the Statistics Act (Canada);

**“census family”** is defined as a married couple and the children, if any, of either and/or both spouses; a couple living common law and the children, if any, of either and/or both partners; or a lone parent of any marital status with at least one child living in the same dwelling and that child or those children. All members of a particular census family live in the same dwelling. A couple may be of opposite or same sex;

**“components of demographic growth”** refers to any of the classes of events generating population movement variations. Births, deaths, migration, marriages, divorces, and new widowhoods are the components responsible for the variations since they alter either the total population or the age, sex, and marital status distribution of the population:

**“emigrant”** refers to a Canadian citizen or immigrant who has left Canada to establish a permanent residence in another country.

**“immigrant”** refers to a person who is, or who has ever been, a landed immigrant or permanent resident. Such a person has been granted the right to live in Canada permanently by immigration authorities;

**“interprovincial migration”** refers to movement from one province or territory to another involving a permanent change in residence. A person who takes up residence in another province or territory is an out-migrant with reference to the province or territory of origin and an in-migrant with reference to the province or territory of destination;

**“intraprovincial migration”** refers to movement from one region to another within the same province or territory involving a permanent change of residence. A person who takes up residence in another region is an out-migrant with reference to the region of origin and an in-migrant with reference to the region of destination;

**“non-permanent residents”** refers to persons who are lawfully in Canada on a temporary basis under the authority of a temporary resident permit, along with members of their family living with them. Non-permanent residents include foreign workers, foreign students, the humanitarian population and other temporary residents;

**“core housing need”** is when housing falls below at least one of the adequacy, affordability or suitability standards and it would have to spend 30% or more of its total before-tax income to pay the median rent of alternative local housing that meets all three housing standards;

**“adequate housing”** means that, according to the residents within the dwelling, no major repairs are required for proper use and enjoyment of said dwelling;

**“affordable housing”** means that household shelter costs equate to less than 30% of total before-tax household income;

**“suitable housing”** means that a dwelling has enough bedrooms for the size and composition of resident households according to National Occupancy Standard (NOS) requirements;

**“dwelling”** is defined as a set of living quarters. Two types of dwelling are identified in the Census, collective dwellings and private dwellings. The former pertains to dwellings which are institutional, communal or commercial in nature. The latter, Private dwelling refers to a separate set of living quarters with a private entrance either from outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance to the dwelling must be one that can be used without passing through the living quarters of some other person or group of persons;

**“private dwelling occupied by usual residents”** refers to a private dwelling in which a person or a group of persons is permanently residing. Also included are private dwellings whose usual residents are temporarily absent on May 11, 2021.

**“private dwelling not occupied by usual residents”** refers to a private dwelling which is not considered the primary place of residence of a household over a calendar year.

**“dwelling type”** means the structural characteristics or dwelling configuration of a housing unit, such as, but not limited to, the housing unit being a single-detached house, a semi-detached house, a row house, an apartment in a duplex or in a building that has a certain number of storeys, or a mobile home;

**“single-detached house”** means a single dwelling not attached to any other dwelling or structure (except its own garage or shed). A single-detached house has open space on all sides, and has no dwellings either above it or below it. A mobile home fixed permanently to a foundation is also classified as a single-detached house;

**“semi-detached house”** means one of two dwellings attached side by side (or back to back) to each other, but not attached to any other dwelling or structure (except its own garage or shed). A semi-detached dwelling has no dwellings either above it or below it, and the two units together have open space on all sides;

**“row house”** means one of three or more dwellings joined side by side (or occasionally side to back), such as a townhouse or garden home, but not having any other dwellings either above or below. Townhouses attached to a high-rise building are also classified as row houses;

**“duplex”** (also known as apartment or flat in a duplex) means one of two dwellings, located one above the other, may or may not be attached to other dwellings or buildings;

**“apartment in a building that has five or more storeys”** means a dwelling unit in a high-rise apartment building which has five or more storeys;

**“apartment in a building that has fewer than five storeys”** means a dwelling unit attached to other dwelling units, commercial units, or other non-residential space in a building that has fewer than five storeys;

**“mobile home”** means a single dwelling, designed and constructed to be transported on its own chassis and capable of being moved to a new location on short notice. It may be placed temporarily on a foundation pad and may be covered by a skirt;

**“extreme core housing need”** has the same meaning as core housing need except that the household has shelter costs for housing that are more than 50% of total before-tax household income;

**“household”** refers to a person or group of persons who occupy the same dwelling and do not have a usual place of residence elsewhere in Canada or abroad;

**“owner household”** refers to a private household where some member of the household owns the dwelling, even if it is still being paid for;

**“renter household”** refers to private households where no member of the household owns their dwelling. The dwelling is considered to be rented even if no cash rent is paid;

**“household maintainer”** refers to whether or not a person residing in the household is responsible for paying the rent, or the mortgage, or the taxes, or the electricity or other services or utilities. Where a number of people may contribute to the payments, more than one person in the household may be identified as a household maintainer. In the case of a household where two or more people are listed as household maintainers, the first person listed is chosen as the primary household maintainer;

**“household size”** refers to the number of persons in a private household;

**“household type”** refers to the differentiation of households on the basis of whether they are census family households or non-census-family households. Census family households are those that contain at least one census family;

**“migrant”** refers to a person who has moved from their place of residence, of which the origin is different than the destination community they reported in. Conversely, a non-migrant is a person who has moved within the same community;

**“mobility status, one year”** refers to the status of a person with regard to the place of residence on the reference day in relation to the place of residence on the same date one year earlier;

**“primary rental market”** means a market for rental housing units in apartment structures containing at least 3 rental housing units that were purpose-built as rental housing;

**“Rental Market Survey”** refers the collection of data samples from all urban areas with populations greater than 10,000 and targets only private apartments with at least three rental units. Among the information provided are median rental prices for units within the primary rental market;

**“secondary rental market”** means a market for rental housing units that were not purpose-built as rental housing;

**“shelter cost”** refers to the average or median monthly total of all shelter expenses paid by households that own or rent their dwelling. Shelter costs for owner households include, where applicable, mortgage payments, property taxes and condominium fees, along with the costs of electricity, heat, water and other municipal services. For renter households, shelter costs include, where applicable, the rent and the costs of electricity, heat, water and other municipal services;

**“subsidized housing”** refers to whether a renter household lives in a dwelling that is subsidized. Subsidized housing includes rent geared to income, social housing, public housing, government-assisted housing, non-profit housing, rent supplements and housing allowances;

**“tenure”** refers to whether the household owns or rents their private dwelling. The private dwelling may be situated on rented or leased land or be part of a condominium. A household is considered to own their dwelling if some member of the household owns the dwelling even if it is not fully paid for, for example if there is a mortgage or some other claim on it. A household is considered to rent their dwelling if no member of the household owns the dwelling;

**“vacancy”** means a unit that, at the time of the CMHC Rental Market Survey, it is physically unoccupied and available for immediate rental.

## Appendix B: Interim Housing Needs Report Requirements

The first legislative requirements for housing needs reports were established in 2019, and required local governments to collect data, analyze trends, and present reports that describe current and anticipated housing needs. The ACRD and its communities completed these reports in 2021.

In 2023, amendments to the Local Government Act introduced new requirements for housing needs reports. Local governments must now use an established methodology (released in June 2024) to identify the 5- and 20-year housing need in their communities and, if a municipality, must update their official community plans (OCPs) and zoning bylaws (ZBLs) to accommodate expected demand. Updating the OCP and ZBL accordingly is a suggestion for electoral areas, but not a requirement.

Communities may choose to complete an interim housing needs report including only the new information or can complete a more comprehensive update.

The Interim Housing Needs Reports are required to include three new additional items:

- The number of housing units needed currently and over the next 5 and 20 years;
- A statement about the need for housing in close proximity to transportation infrastructure that supports walking, bicycling, public transit or other alternative forms of transportation; and,
- A description of the actions taken by local government, since receiving the most recent housing needs report, to reduce housing needs.

The ACRD has elected to complete the interim report requirements and a comprehensive data update using 2021 Census data. For reference, required report content fulfilling the interim report requirements is included in this section. The body of this Community Profile contains all information required by legislation for the Interim Housing Needs Reports and should remain relevant until the next release of Census data, projected for 2027 or 2028.

### NUMBER OF HOUSING UNITS REQUIRED TO MEET CURRENT AND ANTICIPATED DEMAND

**Table 0-0-1: HNR Method base year versus current year estimates**

Description	5-year	20-year	30-year
Total demand from 2021 base year	171	389	517
Total demand from current year (2024)	138	335	437

Further discussion and analysis of anticipated need is included in Section 5 of this report.

## KEY AREAS OF LOCAL NEED

Based on analysis of data and feedback from elected officials and community organizations, the following summary statements describe the current and anticipated housing needs across the following seven key areas: affordable housing, rental housing, special needs housing, housing for seniors, housing for families, shelters for individuals experiencing or at risk of homelessness and housing in close proximity to transportation infrastructure that supports walking, bicycling, public transit, and alternative forms of transportation.

Need	Description
Affordable housing	<p>Affordability remains the largest local contributor to Core Housing Need in the Bamfield, with approximately 11% of local households spending more than 30% of their total income on shelter in 2021. Since then, the gap between income purchasing power and actual house prices likely widened, indicating that homeownership is further out of reach for most residents in Bamfield than it was three years ago.</p> <p>Individuals or families with one income are struggling the most to find affordable housing options in the community, whether to rent or own. Approximately 19% of households earned a "very low" or "low" income. While many in these categories may already be shelter-secure (e.g., retired households on fixed incomes but with fully paid-off mortgages), this percentage represents a notable portion of the population that may be especially vulnerable to affordability challenges.</p> <p>Bamfield and its community partners are working to build new non-market affordable rental options in the community, but projections anticipate at least 114 subsidized affordable housing units and 181 additional market units will be needed by 2041 to meet demand and begin to balance prices.</p>

Need	Description
Rental housing	<p>Homeownership is becoming increasingly unaffordable for the typical household in Bamfield. While local incomes are generally higher than the region overall, this increase does add pressure to residents and thus may push many who would prefer to own a home to rent instead. Although the cost of rent is also likely increasing, it often remains the more cost-effective option between the two tenures.</p> <p>Historical Census data does not reflect this trend, with the share of renter-occupied dwellings decreasing from 15% to 13% between 2016 and 2021. Broader housing cost and rental vacancy trends in Port Alberni and across BC suggest that there should have been a push for more renting since 2021 – if units were made available. As rental vacancy rates continue to remain low, there should be an anticipated demand for rental housing relative to available supply. Although vacancy rates typically reflect purpose-built rentals in urban areas, a declining vacancy rate in these markets forces households to seek alternatives in lower-density markets where there is better availability and prices. This leads to increased demand overall.</p> <p>Projection calculations support the data trends, anticipating a continued increase in rental housing demand, with approximately 43% of all dwellings ideally built purposefully as a rental units in 2041.</p>
Special needs housing	<p>Although data on waitlists and core housing need is not specific to community members with special needs, national disability statistics show that overall rates of disability increased from 22.3% to 27.0%<sup>2</sup> between 2017 and 2022 surveys. Much of this increase is attributed to the growth of the senior population. As the population in Bamfield ages, projections expect the need for more accessible and specialized housing to increase.</p> <p>Increases were also observed among youth and working-age adults, with significant rises in mental health, learning, and developmental challenges. This indicates a broad need for improved access to supportive housing options that cater to various specific support needs and age demographics.</p>

2 Statistics Canada. (2023, December 1). Canadian Survey on Disability, 2017 to 2022. <https://www150.statcan.gc.ca/n1/daily-quotidien/231201/dq231201b-eng.htm>

Need	Description
<p>Housing for seniors</p>	<p>According to BC derived projections, Bamfield could expect that senior-led households will continue to grow over the next two decades. By 2041, senior-led households may increase by 38% and could make up 41% of households.</p> <p>In 2022, the Canadian disability rate among the senior population was 40%, an increase of three percentage points since the last survey in 2017. A significant portion of this rate is related to mobility issues, and the likelihood of disability that increases with age.</p> <p>Given the anticipated growth in senior households and the elevated disability rate within this group, increased senior housing interventions are necessary. These could include ensuring senior housing and facilities are widely permitted locally, further modifying building standards to support aging in place, and/or developing and improving existing senior services and programs.</p> <p>While many solutions fall outside the direct influence of local government, there may be opportunities to partner with other levels of government and local or regional organizations to encourage appropriate seniors housing.</p>
<p>Housing for families</p>	<p>Projections suggest that young family households may increase over the next two decades. Thus, the demand for family-specific dwellings (e.g., those with more bedrooms or larger floor areas) may be notable.</p> <p>Young families are vital for sustaining local employment and productivity. Affordable options with multiple bedrooms are key to meeting the needs of families, especially lone parent households who often need non-market options to ensure appropriate affordability. Families may also be served by interventions in other areas of the housing spectrum, for example by additional seniors housing that helps reintegrate larger homes back into the market.</p>

Need	Description
Shelters to address homelessness	<p>While shelters are often located in larger urban communities, homelessness is not confined to these areas. National and provincial trends show that overall homelessness is on the rise, with hidden homelessness likely increasing, particularly in small urban and rural areas.</p> <p>About 4% of local households were identified as earning "very low" incomes. These individuals are the most vulnerable to changes in their housing circumstances and are the most likely to require emergency housing interventions.</p> <p>Addressing homelessness locally is ideal, as it allows residents to remain within their community. However, doing so can be challenging without provincial or federal support. The regional district should stay engaged in homelessness strategy initiatives to help coordinate and determine the allocation of emergency housing services and programs.</p>
Proximity to transportation	<p>In the Alberni Valley, the existing BC Transit system that primarily services the City of Port Alberni also connects with areas in Area A (Bamfield) and Area F (Cherry Creek) along the city boundary. Since 2021, the ACRD has experienced in-fill residential development in Bamfield neighbourhoods that are serviced by the existing transit route. As part of the OCP update projects, the ACRD will be engaging with communities on the need to manage housing growth more effectively by focusing new development and greater housing diversity into areas that are serviced appropriately. The ACRD will also engage with the community on any discussion about transit to gather public input on the opportunities, impacts and challenges associated with transit in the area.</p> <p>The Electoral Area A (Bamfield) OCP comprehensive update will provide the primary framework for engaging with the community on the need for housing in close proximity to active transportation networks and transit opportunities. The OCP will provide the vision, goals, and objectives for managing housing growth and promoting improved connection with transportation networks. The consideration of community amenities and other development finance tools in the review of development approvals will allow the ACRD to ensure that new development aligns with this vision and supports the expansion and improvement of community connections with transportation networks where possible.</p>

**LOOKING BACK**

<b>General Housing Actions</b>	
<b>Date</b>	<b>Description of Action or Policy</b>
June 2022	The ACRD hosted a Regional Housing Workshop in Port Alberni attended by local government and First Nations elected officials and staff, Provincial agencies, community groups, and other parties interested in regional housing. The workshop included presentations from BC Assessment, Tofino Housing Corporation, Canadian Mortgage and Housing Corporation, and a developer with a roundtable discussion on opportunities and challenges in housing.
May 2023	The ACRD adopted amendments to the Development Procedures Bylaw to delegate Form and Character Development Permits to staff. The delegation added to the Environmental Protection and Natural Hazard Protection Development Permits that are already delegated to staff. This allows a streamlined process in the approval of Development Permits for multi-family residential development by removing the need to engage with the Advisory Planning Commissions and the Board of Directors.
June 2023	The ACRD Board endorsed a process to give notice that a public hearing would not be held for rezoning applications where the proposal is consistent with the area OCP policies and objectives. This streamlined the rezoning process by removing the need to hold public hearings in many cases. The process was replaced by the Provincial legislation updates in November 2023 which removed the need to hold public hearings for housing developments that are consistent with the area OCP.
2022-2023	The ACRD held a number of public engagements throughout 2022 and 2023 relating to the development of a draft updated Zoning Bylaw that would replace the existing ACRD Zoning Bylaw adopted in 1973. The engagement included public open houses, focus group meetings, Advisory Planning Commission meetings, and ACRD Committee and Board meetings. Throughout the engagement, housing was a key theme discussed, with many participants expressing the need for more flexibility in housing development to support new housing construction within the region.
October- November 2023	In Fall 2023, the ACRD hosted community planning engagement open houses and workshops in each of the six Electoral Areas in the region. The open houses were an opportunity to engage with the public on challenges and opportunities in relation to key community planning themes and to develop initial community visions and goals for the upcoming comprehensive updates to the six Electoral Area OCPs. One of the key themes discussed with the public was housing availability. In Bamfield, there was a desire to look at supporting long-term dwelling in RVs, more options for home-based businesses, and amenities that support residents such as an off-road trail along Bamfield Road and a community gathering space. The Regional District heard similar feedback to that received during the Zoning Bylaw Update engagements – a desire for greater diversity and supply of housing throughout the region.

**General Housing Actions**

Date	Description of Action or Policy
September 2024 to present	The ACRD launched a project in summer 2024 to begin comprehensive updates to all six of the Electoral Area OCPs phased over the next three years, beginning with Area C – Long Beach in September 2024 and followed by Area D – Sproat Lake in winter 2024.
October 2024 to present	The ACRD received a grant from the Local Government Development Approvals Program to conduct a project that will review the ACRD’s development application and building permit application approval processes and make recommendations to promote a more effective and efficient housing approval process overall. The ACRD has engaged a consultant to guide the project with an anticipated completion date by May 2025.

**Zoning Amendments**

Date	Description of Action or Policy
June 2024	Adopted Bylaw P1500 amended the Zoning Bylaw to comply with the Province’s SSMUH legislation. The zoning amendment expanded the existing ADU regulations to permit secondary suites within the principal dwelling in the R1, R2, RA1, RA2, and RA3 zones with no minimum lot size. The amendment impacts a total of 1,404 R-zoned parcels smaller than 0.4 hectare in the ACRD where a secondary suite is now permitted and where an ADU was not previously allowed. This includes 203 parcels in Area E. The zoning amendment also amended the setbacks and lot coverage required in the RA3 zone to be less restrictive in the siting and design of housing.

**Major Housing Related Variances Granted**

Date	Description of Action or Policy
2021-2024	The ACRD Board has approved seven development variance applications in Area E to support new housing. The granting of variances allows for greater flexibility in the siting and design of housing on a parcel and promotes the removal of barriers to housing construction.

**Rezoning and Subdivision Applications Approved**

<b>Date</b>	<b>Description of Action or Policy</b>
2021-2024	The ACRD Board approved 17 rezonings for 28 potential new lots or units in Area E since the last Housing Needs Report.
2021-2024	The ACRD responded to seven subdivision application referrals (for 11 new lots) that complied with existing zoning and are currently either approved by the Ministry of Transportation and Infrastructure (MOTI) or in the MOTI subdivision approval process.

## Appendix C: Mortgage Assumptions

Variable	Assumption
Amortization period	25 years
Payment frequency	monthly
Interest rate	Prevailing (of a given year) average weekly rate for 5-year fixed mortgage
Down payment	10%
CMHC insurance premium	3.10%
Income used for shelter expenses	30%
Ancillary shelter costs (e.g., utilities, insurance, etc.)	25%
Direct shelter costs	100% – ancillary = 75%
