In any event, given that it is a panhandle driveway with access off of Lamarque there aren't concerns from a BCWS point of view.

Thanks Kathy,

Eddie

Thank you Kathy.

You don't need anything from me for this at this point, correct?

Have a great vacation!!!

Eddie

Island Health will have an opportunity to review the subdivision application through the referral process with the Ministry of Transportation and Infrastructure to ensure the proposal meets the intent of Island Health's Subdivision Standards.

The purpose of the Island Health Subdivision Standards is to ensure that new lots created will support a primary and reserve sewerage system. The intent is to provide a viable long-term solution for onsite wastewater, thereby eliminating the need for costly extension of municipal sewer systems. These standards are designed to address concerns of detrimental cumulative impact associated with increase density using onsite sewerage systems. The intent is to prolong the expected life of sewerage systems and safeguard the environment and public health.

While a Registered Onsite Wastewater Practitioner is able to evaluate the ability of the soils to support an onsite sewerage system, the Sewerage System Standard Practice Manual specifically states that the manual is not intended to address the potential cumulative impacts of discharge from multiple sewerage systems within a given area.
